

## **Clean Code Cheat Sheet**

1. Have self-explanatory variables
2. Periodically run tests
3. Write good comments
4. Remove dead code(hidden in comments)
5. All imports to be placed at the top of file
6. Error handling throw exceptions and write own exceptions if necessary and add context
7. Don't repeat yourself write functions
8. Functions should perform a single task
9. Descriptive function names (intuitive)
10. Use parameter types and return types in functions and classes
11. Code should use consistent indentation
12. Add **`**docstrings**`** to functions and classes
